Subject Index of Volume 28

AAA
The 'pure-IP' Moby Dick 4G architecture 1014
AAL2
IP versus AAL2 for transport in the UMTS radio access network 477
Absolute QoS guarantees
Providing absolute QoS in asynchronous bufferless optical packet/burst switched networks with the adaptive preemptive drop policy 1038
Access control
Shepherd: A lightweight statistical authentication protocol for access control in wireless LANs 1618
Access network design
Near-optimal tree-based access network design 236
ACK Spoofing
Short-circuiting the congestion signaling path for AQM algorithms using reverse flow matching 2082
ACOant colony optimization
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Active networks
Model checking active networks with SPIN 609
Multimedia data transmission and control using active networks 623
Optimizing content distribution through adaptive distributed caching 640
JOR: a content-based object router 654
Future active Ip networks security architecture 688
Interactive transparent networking–modeling examples of snoop and WTCP protocols 702
Active queue management
Lifetime-based TCP service differentiation 108
Design and analysis of multi-level active queue management mechanisms for emergency traffic 162
A simulation study of the adaptive RIO (A-RIO) queue management algorithm 300
A robust active queue management algorithm in large delay networks 485
Subsidized RED: an active queue management mechanism for short-lived flows 540
Design a congestion controller based on sliding mode variable structure control 1050
A stable rate-based algorithm for active queue management 1731
Short-circuiting the congestion signaling path for AQM algorithms using reverse flow matching 2082
Ad hoc
Performance analysis of topology-unaware TDMA MAC schemes for ad hoc networks with topology control 313
Distributed multichannel MAC protocol for IEEE 802.11 ad hoc wireless LANs 1000
Performance improvements of integrating ad hoc operations into infrastructure IEEE 802.11 wireless local area networks 1123
Ad hoc network
An efficient broadcast relay scheme for MANETs 467
A modified power saving mode in IEEE 802.11 distributed coordinator function 1214
Performance evaluation of a multilevel hierarchical location management protocol for ad hoc networks 1110
Ad hoc networks
An address autoconfiguration protocol for IPv6 hosts in a mobile ad hoc network 339
Ad hoc wireless networks
Physical layer impact on the design and performance of ?routing and broadcasting protocols in ad hoc and sensor networks 1138
Adaptation
Automatic creation and reconfiguration of network-aware service access paths 591
Adaptive
Adaptive coding schemes for support of multicast audio to wireless devices 125
Configurable software-based edge router architecture 1692
Adaptive allocation
Adaptive online bandwidth allocation and reservation for QoS sensitive multimedia networks 1959
Adaptive bandwidth provisioning
Reinforcement learning-based dynamic bandwidth provisioning for quality of service in differentiated services networks 1741
Adaptive network infrastructure
Automatic creation and reconfiguration of network-aware service access paths 591
Adaptive policies
An adaptive framework for addressing fairness issues in wireless networks 1167
Address autoconfiguration
An address autoconfiguration protocol for IPv6 hosts in a mobile ad hoc network 339
Admission control
Time-aware admission control on top of time-unaware network infrastructures 405
Fair intelligent admission control over resource-feedback DiffServ network 1770
An end-to-end QoS framework with on-demand bandwidth reconfiguration 2034

doi: 10.1016/S0140-3664(05)00373-7

FIAC: a resource discovery-based two-level admission control for differentiated service networks 2094
Advertisement interval
Movement detection delay analysis in mobile IP 550
Agent
Design and implementation of a network domain agency for scaleable QoS in the Internet 12
Agents
A semantic solution for data integration in mixed sensor networks 1564
Aggregate scheduling
Traffic shaping in aggregate-based networks: implementation and analysis 274
Algorithm
Distributed multichannel MAC protocol for IEEE 802.11 ad hoc wireless LANs 1000
Anomaly detection
Application of online-training SVMs for real-time intrusion detection with different considerations 1428
Anonymity
A simple and robust virtual infrastructure for massively deployed wireless sensor networks 1505
Anonymity service
Privacy-enhancing technologies for the world wide web 1791
Anonymous browsing
Privacy-enhancing technologies for the world wide web 1791
Anonymous publishing
Privacy-enhancing technologies for the world wide web 1791
APN
An intelligent GGSN dispatching mechanism for UMTS 947
Application-layer
Improving delivery ratios for application layer multicast in mobile ad hoc networks 1669
ARQ
Wireless packet fair queueing algorithms with link level retransmission 713
ASON
Asons: an automatically switched optical networks simulator 224
Assignment of cells to switches
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Associate rule
Cache-miss-initiated prefetch in mobile environments 741
Asymmetrical traffic
Analysis of multiservice cellular networks with asymmetrical traffic and handoff queue 864
Asynchronous alarm
An efficient load balancing strategy for scalable WAP gateways 1028
Asynchronous MA
Markov chain analysis of collaborative codes in random multi access communication systems 441
ATM
Integrating connectionless and connection-oriented traffic using quantum packets 898
ATM network
A modeling and simulation methodology for anaiyzing ATM network vulnerabilities 1317
ATM networks
High-speed networks: definition and fundamental attributes 956
Audio
Design, implementation, and evaluation of the audio/video distribution transport protocol (AVDTP) for high quality audio support over Bluetooth 215
Authentication
Efficient authentication protocols of GSM 921
Shepherd: A lightweight statistical authentication protocol for access control in wireless LANs 1618
Autoconfiguration
Configurable software-based edge router architecture 1692
Auto-configuration
ScatterWeb: A wireless sensornet platform for research and teaching 1545
Autoregressive model
Robust delay estimator for playout buffering in Internet audio applications 1938
Availability
A proactive approach towards always-on availability in broadband cable networks 51

Balanced-energy scheduling
Balanced-energy sleep scheduling scheme for high-density cluster-based sensor networks 1631
Bandwidth allocation
Lifetime-based TCP service differentiation 108
Bandwidth brokers
Inter-domain QoS routing on Diffserv networks: a region-based approach 174
Bandwidth fairness
Graceful degradation of loss-tolerant QoS using (m,k)-firm constraints in guaranteed rate networks 1393
Bandwidth management
An end-to-end QoS framework with on-demand bandwidth reconfiguration 2034
Bandwidth provisioning
Adaptive bandwidth provisioning with explicit respect to QoS requirements 1862
Bandwidth reservation
Fair and efficient packet scheduling algorithms for multiple classes of service under QoS guarantee in UMTS 379
Adaptive online bandwidth allocation and reservation for QoS sensitive multimedia networks 1959
Behavioural user hints
Usage based service differentiation for end-to-end quality of service management 2146
Binary trie
Simple and fast IP lookups using binomial spanning trees 529

Binomial spanning tree
Simple and fast IP lookups using binomial spanning trees 529
Bit vector
Performance analysis of multi-dimensional packet classification on programmable network processors 1752
Bit-rate
Analysis of virtual-time complexity in weighted fair queuing 802
Bluetooth
Design, implementation, and evaluation of the audio/video distribution transport protocol (AVDTP) for high quality audio support over Bluetooth 215
SF-DeviL: an algorithm for energy-efficient Bluetooth scatternet formation and maintenance 1276
Bluetooth scatternet
A self-adaptive zone routing protocol for Bluetooth scatternets 37
Bluetooth scatternets
Robust topology formation using BTnodes 1523
Broadcasting
An efficient broadcast relay scheme for MANETs 467
Physical layer impact on the design and performance of routing and broadcasting protocols in ad hoc and sensor networks 1138
BTSbase transceiver station
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Buffer management
A stable rate-based algorithm for active queue management 1731
Toward end-to-end fairness: a framework for the allocation of multiple prioritized resources in switches and routers 2105
Bulk repeat
TCP bulk repeat 507

Cable modem termination system
A proactive approach towards always-on availability in broadband cable networks 51
Cable TV
The enhanced staircase broadcasting for VBR videos 1903
Cache capacity
Design and performance analysis of multimedia document retrieval strategies for networked Video-on-Reservation systems 1910
Cache hit ratios
Coordinated data prefetching for web contents 1947
Cache management
Cache-miss-initiated prefetch in mobile environments 741
Cache miss
Cache-miss-initiated prefetch in mobile environments 741
Caching
Combining replica placement and caching techniques in content distribution networks 1062
Calibration
Towards a unified view on space and time in sensor networks 1484
Call admission control
An adaptive handoff priority scheme for wireless MC-CDMA cellular networks supporting realtime multimedia applications 1240
A general call admission policy for next generation wireless networks 1798
Call signaling
On overlapping resource management and call setup signaling: a new signaling approach for internet multimedia applications 851
Capacity estimation
Class-based downlink capacity estimation of a WCDMA network in a multiservice context 1443
Cartographer
Internet core topology mapping and analysis 494
Catastrophic failures
A modeling and simulation methodology for analyzing ATM network vulnerabilities 1317
Causality
Causally ordered delivery in a hierarchical group of peer processes 1337
Cell
Cell based energy density aware routing: a new protocol for improving the lifetime of wireless sensor networks 1293
Cell loss ratio
A real-time loss performance monitoring scheme 150
Cell-mode
SPF: to improve the performance of packet-mode scheduling 1380
Cellular networks
An adaptive handoff priority scheme for wireless MC-CDMA cellular networks supporting realtime multimedia applications 1240
Enabling ubiquitous sensor networking over mobile networks through peer-to-peer overlay networking 1586
Channel failures
Restoration mechanisms for handling channel and link failures in optical WDM networks: tunable laser-based switch architectures and performance analysis 987
CICQ
Performance evaluation of new scheduling methods for the RR/RR CICQ switch 417
Class-based queuing
Class-based downlink capacity estimation of a WCDMA network in a multiservice context 1443
Clock offset
One-way delay estimation and its application 819
Cluster-based
Balanced-energy sleep scheduling scheme for high-density cluster-based sensor networks 1631
Clustered architecture
An efficient load balancing strategy for scalable WAP gateways 1028
Clustering
Algorithms for ad hoc and sensor networks 1498

A simple and robust virtual infrastructure for massively deployed wireless sensor networks 1505
Code division multiple access (CDMA)
Receiver-initiated multiple access protocols for spread spectrum mobile ad hoc networks 1251
Coding
Adaptive coding schemes for support of multicast audio to wireless devices 125
Collaborative codes
Markov chain analysis of collaborative codes in random multi access communication systems 441
Collision avoidance
A modified power saving mode in IEEE 802.11 distributed coordinator function 1214
Collision probability
Performance of wireless networks with hidden nodes: a queuing-theoretic analysis 1179
Combinatorial optimization
Finding multiple routing paths in wide-area WDM networks 811
Combined input and output queued switch
Packet-based scheduling algorithm for CIOQ switches with multiple traffic classes 1410
Communications
High-speed networks: definition and fundamental attributes 956
Compound Poisson process
Movement detection delay analysis in mobile IP 550
Computer security
Application of online-training SVMs for real-time intrusion detection with different considerations 1428
Congestion avoidance
TCP Vegas-A: Improving the Performance of TCP Vegas 429
Congestion control
Towards a Measurement Based Networking approach for Internet QoS improvement 259
Subsidized RED: an active queue management mechanism for short-lived flows 540
Delay-based early congestion detection and adaptation in TCP: impact on web performance 837
Design a congestion controller based on sliding mode variable structure control 1050
A stable rate-based algorithm for active queue management 1731
Marking algorithms for service differentiation of TCP traffic 2058
Connectivity
A graph-based proactive fault identification approach in computer networks 366
Connectivity structure
A graph-based proactive fault identification approach in computer networks 366
Conservation law
Providing absolute QoS through virtual channel reservation in optical burst switching networks 967
Constrained Steiner tree
Distributed multicast routing for delay and delay variation-bounded Steiner tree using simulated annealing 1356
Content distribution
Optimizing content distribution through adaptive distributed caching 640
Content distribution network (CDN)
Combining replica placement and caching techniques in content distribution networks 1062
Content-based router
JOR: a content-based object router 654
Context awareness
Redundant positioning architecture 1575
Continuous-space reinforcement learning
Reinforcement learning-based dynamic bandwidth provisioning for quality of service in differentiated services networks 1741
Controllers
A study of robust active queue management schemes for correlated traffic 1
Cooperative caching
Optimizing content distribution through adaptive distributed caching 640
Correlation
A study of robust active queue management schemes for correlated traffic 1
Coverage area
An efficient broadcast relay scheme for MANETs 467
CPconstraint programming
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Crawlers
An investigation of web crawler behavior: characterization and metrics 880
Cross-Layer Design
End-to-end support for statistical quality of service in heterogeneous mobile ad hoc networks 2119
CSMA-CA
Access delay for nodes with finite buffers in IEEE 802.15.4 beacon enabled PAN with uplink transmissions 1152
CSMA/CA
Enhancing IEEE 802.11 MAC in congested environments 1605

Data
IP versus AAL2 for transport in the UMTS radio access network 477
Data communication
A fair scheduling algorithm with traffic classification for wireless networks 1225
Data integration
A semantic solution for data integration in mixed sensor networks 1564
Data origin authentication
RLH: receiver driven layered hash-chaining for multicast data origin authentication 726
Data storage
Content-access QoS in peer-to-peer networks using a fast MDS erasure code 1778
DC-CMST problem
Least cost heuristic for the delay-constrained capacitated minimum spanning tree problem 1371

de Bruijn graph
A new scalable optimal topology for multi-hop optical networks 557
Delay
A robust active queue management algorithm in large delay networks 485
Assessment of objective voice quality over best-effort networks 582
Delay analysis
Performance analysis of large multicast switches with multicast virtual output queues 189
Performance of wireless networks with hidden nodes: a queuing-theoretic analysis 1179
Delay and delay variation-bounded
Distributed multicast routing for delay and delay variation-bounded Steiner tree using simulated annealing 1356
Delay estimation
Robust delay estimator for playout buffering in Internet audio applications 1938
Delay guarantee
Graceful degradation of loss-tolerant QoS using (m,k)-firm constraints in guaranteed rate networks 1393
Delay measurement
One-way delay estimation and its application 819
Diameter
A new scalable optimal topology for multi-hop optical networks 557
Differentiated services
Traffic shaping in aggregate-based networks: implementation and analysis 274
Framework for parameter mapping to provide end-to-end QoS guarantees in IntServ/DiffServ architectures 1074
Reinforcement learning-based dynamic bandwidth provisioning for quality of service in differentiated services networks 1741
Scalable quality of service across multiple domains 1997
Differentiated services architectures
Assured end-to-end QoS through adaptive marking in multi-domain differentiated services networks 2009
Diffserv
Inter-domain QoS routing on Diffserv networks: a region-based approach 174
Delay bounds for FIFO aggregates: a case study 287
A simulation study of the adaptive RIO (A-RIO) queue management algorithm 300
Framework for parameter mapping to provide end-to-end QoS guarantees in IntServ/DiffServ architectures 1074
Fair intelligent admission control over resource-feedback DiffServ network 1770
A measurement-based approach for dynamic QoS adaptation in DiffServ networks 2020
An end-to-end QoS framework with on-demand bandwidth reconfiguration 2034
FIAC: a resource discovery-based two-level admission control for differentiated service networks 2094
Dimensioning
Scheduling algorithms in optical packet switches with input wavelength conversion 1456
Discrete-time Markov chains
Markov chain analysis of collaborative codes in random multi access communication systems 441
Dissapearing computer
Development of field programmable modular wireless sensor network nodes for ambient systems 1531
Distributed
Energy efficient distributed image compression in resource-constrained multihop wireless networks 1658
Distributed admission control
Weight allocation in distributed admission control for wireless networks 199
Distributed algorithm
Distributed multicast routing for delay and delay variation-bounded Steiner tree using simulated annealing 1356
Distributed objects
Redundant positioning architecture 1575
Distributed protocol
Protocols for rapid restoration in WDM optical networks 86
Domain
Design and implementation of a network domain agency for scaleable QoS in the Internet 12
Dominating sets
Algorithms for ad hoc and sensor networks 1498
Downlink
Class-based downlink capacity estimation of a WCDMA network in a multiservice context 1443
DRR
Three new approaches for adjustment and improvement of the RR scheduler in a dynamic resource environment 929
Weighted deficit earliest departure first scheduling 1711
Dynamic bandwidth allocation
Feedback-based bandwidth allocation with call admission control for providing delay guarantees in IEEE 802.11e networks 325
Dynamic bandwidth estimation
TCP Prairie: a sender-only TCP modification based on adaptive bandwidth estimation in wired-wireless networks 246
Dynamic configuration
Configurable software-based edge router architecture 1692
Dynamic reorganization
Distributed multicast routing for delay and delay variation-bounded Steiner tree using simulated annealing 1356
Dynamic routing
Multiple path routing algorithm for IP networks 829

ECG
Performance analysis of low rate wireless technologies for medical applications 1266
ECN
Corruption and reordering robust tcp-friendly rate control 97
Marking algorithms for service differentiation of TCP traffic 2058

EDF
Weighted deficit earliest departure first scheduling 1711
Edge router
Configurable software-based edge router architecture 1692
Effective bandwidth
Effective bandwidth shaping: a framework for resource dimensioning—extended version 1703
Embodied interaction
Orientation sensing for gesture-based interaction with smart artifacts 1552
Emergency services
Design and analysis of multi-level active queue management mechanisms for emergency traffic 162
End-to-end delay
One-way delay estimation and its application 819
End-to-end delay bounds
Delay bounds for FIFO aggregates: a case study 287
End-to-end QoS
Framework for parameter mapping to provide end-to-end QoS guarantees in IntServ/DiffServ architectures 1074
End-to-End QoS
An end-to-end QoS framework with on-demand bandwidth reconfiguration 2034
End-to-end quality of service
Assured end-to-end QoS through adaptive marking in multi-domain differentiated services networks 2009
End-to-end quality of service management
Usage based service differentiation for end-to-end quality of service management 2146
Energy density
Cell based energy density aware routing: a new protocol for improving the lifetime of wireless sensor networks 1293
Energy efficiency
Balanced-energy sleep scheduling scheme for high-density cluster-based sensor networks 1631
Energy efficient
Energy efficient distributed image compression in resource-constrained multihop wireless networks 1658
Energy saving
Building programmable routing service for sensor networks 664
Energy-efficient protocols
A simple and robust virtual infrastructure for massively deployed wireless sensor networks 1505
Energy-efficient topology construction
SF-DeviL: an algorithm for energy-efficient Bluetooth scatternet formation and maintenance 1276
Erasure code
Content-access QoS in peer-to-peer networks using a fast MDS erasure code 1778
ERR
Three new approaches for adjustment and improvement of the RR scheduler in a dynamic resource environment 929
Explicit multicast
An hybrid explicit multicast/recursive unicast approach for multicast routing 1814
Failure recovery
Restoration mechanisms for handling channel and link failures in optical WDM networks: tunable laser-based switch architectures and performance analysis 987
Fair queueing
Graceful degradation of loss-tolerant QoS using (m,k)-firm constraints in guaranteed rate networks 1393
Fair queuing
A fair scheduling algorithm with traffic classification for wireless networks 1225
Fair scheduling
An evaluation of fair packet schedulers using a novel measure of instantaneous fairness 1925
Toward end-to-end fairness: a framework for the allocation of multiple prioritized resources in switches and routers 2105
Fairness
Lifetime-based TCP service differentiation 108
Fair and efficient packet scheduling algorithms for multiple classes of service under QoS guarantee in UMTS 379
An adaptive framework for addressing fairness issues in wireless networks 1167
An evaluation of fair packet schedulers using a novel measure of instantaneous fairness 1925
Fault identification
A graph-based proactive fault identification approach in computer networks 366
Fault recovery
Fault recovery mechanism in single-hop sensor networks 1877
Feedback control
Feedback-based bandwidth allocation with call admission control for providing delay guarantees in IEEE 802.11e networks 325
FIFO aggregation
Delay bounds for FIFO aggregates: a case study 287
File sizes
Lognormal and Pareto distributions in the Internet 790
Flash crowd
Short-circuiting the congestion signaling path for AQM algorithms using reverse flow matching 2082
Flat pricing
Optimization of radio resource management schemes in UMTS using pricing 1761
Flooding
An efficient broadcast relay scheme for MANETs 467
Flow control
Design a congestion controller based on sliding mode variable structure control 1050
Flow table implementation
Subsidized RED: an active queue management mechanism for short-lived flows 540
ForCES
Configurable software-based edge router architecture 1692
Formal specification
Model checking active networks with SPIN 609

Fragmentation
Multimedia data transmission and control using active networks 623
Fragmentation
Efficient techniques for improved QoS performance in WDM optical burst switched networks 754
Fundamental attributes
High-speed networks: definition and fundamental attributes 956
Fuzzy logic
A self-adaptive zone routing protocol for Bluetooth scatternets 37

G.8080
Asons: an automatically switched optical networks simulator 224
4G architecture
The 'pure-IP' Moby Dick 4G architecture 1014
Gaussian process
Adaptive bandwidth provisioning with explicit respect to QoS requirements 1862
Geographic routing
Performance evaluation of a multilevel hierarchical location management protocol for ad hoc networks 1110
Geo-routing
Algorithms for ad hoc and sensor networks 1498
Gesture recognition
Orientation sensing for gesture-based interaction with smart artifacts 1552
GGSN
An intelligent GGSN dispatching mechanism for UMTS 947
Global roaming
An approach for managing global mobility and roaming in the next-generation wireless systems 571
GMPLS
Asons: an automatically switched optical networks simulator 224
GPRS
The study of performance enhancement for integrated voice/data wireless networks by link adaptation 519
Graph theory
A graph-based proactive fault identification approach in computer networks 366
Group communications
Causally ordered delivery in a hierarchical group of peer processes 1337
GSM
Efficient authentication protocols of GSM 921
Guard channel policy
A general call admission policy for next generation wireless networks 1798

Handoff
A simple and scalable handoff prioritization scheme 773
An adaptive handoff priority scheme for wireless MC-CDMA cellular networks supporting realtime multimedia applications 1240
Handoff prioritization
A simple and scalable handoff prioritization scheme 773
Handoff queue
Analysis of multiservice cellular networks with asymmetrical traffic and handoff queue 864
Healthcare systems
Performance analysis of low rate wireless technologies for medical applications 1266
Heterogeneous network
An optimal cache algorithm for streaming VBR video over a heterogeneous network 1852
Heuristic
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Heuristic algorithm
Least cost heuristic for the delay-constrained capacitated minimum spanning tree problem 1371
Hidden nodes
Performance of wireless networks with hidden nodes: a queuing-theoretic analysis 1179
Hierarchical group
Causally ordered delivery in a hierarchical group of peer processes 1337
High-speed networks
High-speed networks: definition and fundamental attributes 956
Hop count
Cell based energy density aware routing: a new protocol for improving the lifetime of wireless sensor networks 1293
Hot-video broadcasting
The enhanced staircase broadcasting for VBR videos 1903
HTTP response time
Subsidized RED: an active queue management mechanism for short-lived flows 540
Hybrid algorithm
Combining replica placement and caching techniques in content distribution networks 1062

IEEE 802.11
Performance of wireless networks with hidden nodes: a queuing-theoretic analysis 1179
Modeling and optimization of wireless local area network 1204
Enhancing IEEE 802.11 MAC in congested environments 1605
IEEE 802.11 MAC protocol
A modified power saving mode in IEEE 802.11 distributed coordinator function 1214
IEEE 802.11b
Performance analysis under finite load and improvements for multirate 802.11 1095
IEEE Std 802.15.4
Access delay for nodes with finite buffers in IEEE 802.15.4 beacon enabled PAN with uplink transmissions 1152
Image compression
Energy efficient distributed image compression in resource-constrained multihop wireless networks 1658
Inertial sensors
Orientation sensing for gesture-based interaction with smart artifacts 1552

Infrastructure
Performance improvements of integrating ad hoc operations into infrastructure IEEE 802.11 wireless local area networks 1123
Input queueing switches
SPF: to improve the performance of packet-mode scheduling 1380
Input queuing
Performance analysis of large multicast switches with multicast virtual output queues 189
Integrated services
Framework for parameter mapping to provide end-to-end QoS guarantees in IntServ/DiffServ architectures 1074
Interactive modeling
Interactive transparent networking–modeling examples of snoop and WTCP protocols 702
Interarrival times
Lognormal and Pareto distributions in the Internet 790
Interference
Algorithms for ad hoc and sensor networks 1498
Internal mode principle
A robust active queue management algorithm in large delay networks 485
Internet
Internet core topology mapping and analysis 494
Internet control messages protocol
A graph-based proactive fault identification approach in computer networks 366
Internet monitoring
Towards a Measurement Based Networking approach for Internet QoS improvement 259
Internet QoS
Capacity requirements of traffic handling schemes in multi-service networks 2070
Internet services
Automatic creation and reconfiguration of network-aware service access paths 591
Internet traffic
Markov models of internet traffic and a new hierarchical MMPP model 1835
Intrusion detection
Application of online-training SVMs for real-time intrusion detection with different considerations 1428
IntServ
Framework for parameter mapping to provide end-to-end QoS guarantees in IntServ/DiffServ architectures 1074
IntServ over DiffServ
An end-to-end QoS framework with on-demand bandwidth reconfiguration 2034
IP
IP versus AAL2 for transport in the UMTS radio access network 477
An hybrid explicit multicast/recursive unicast approach for multicast routing 1814
IP lookup
Simple and fast IP lookups using binomial spanning trees 529
IP networks
A simulation study of the adaptive RIO (A-RIO) queue management algorithm 300
High-speed networks: definition and fundamental attributes 956
IP packet
Availability of end-to-end ideal QoS in IP packet networks 2047
IP-over-WDM networks
Providing absolute QoS through virtual channel reservation in optical burst switching networks 967
IPv6
An address autoconfiguration protocol for IPv6 hosts in a mobile ad hoc network 339
IXP1200
Performance analysis of multi-dimensional packet classification on programmable network processors 1752

Jitter
Assessment of objective voice quality over best-effort networks 582
Lagrangean relaxation
Near-optimal tree-based access network design 236
LAN
Distributed multichannel MAC protocol for IEEE 802.11 ad hoc wireless LANs 1000
Large-scale group
Causally ordered delivery in a hierarchical group of peer processes 1337
Layered hash-chaining
RLH: receiver driven layered hash-chaining for multicast data origin authentication 726
Least cushion first/most urgent first scheduling algorithm
Packet-based scheduling algorithm for CIOQ switches with multiple traffic classes 1410
Legacy routers
Traffic shaping in aggregate-based networks: implementation and analysis 274
Lifetime
Cell based energy density aware routing: a new protocol for improving the lifetime of wireless sensor networks 1293
Link adaptation
The study of performance enhancement for integrated voice/data wireless networks by link adaptation 519
Link bandwidth
Design and performance analysis of multimedia document retrieval strategies for networked Video-on-Reservation systems 1910
Link cost
Multi-class QoS routing strategies based on the network state 1348
Link level retransmission
Wireless packet fair queueing algorithms with link level retransmission 713
Load balancing
Efficient techniques for improved QoS performance in WDM optical burst switched networks 754
Multiple path routing algorithm for IP networks 829
An efficient load balancing strategy for scalable WAP gateways 1028

Localization
Towards a unified view on space and time in sensor networks 1484
Location awareness
Redundant positioning architecture 1575
Location/mobility management
Performance evaluation of a multilevel hierarchical location management protocol for ad hoc networks 1110
Long-tailed distribution
Lognormal and Pareto distributions in the Internet 790
Loss tomography
A bottom-up inference of loss rate 351
Low-power
ScatterWeb: A wireless sensornet platform for research and teaching 1545
LRU model
Combining replica placement and caching techniques in content distribution networks 1062
Lyapunov function
Packet scheduling in input-queued switches with a speedup of less than two and scheduling algorithms for switches with a configuration overhead 1721

MAC
Performance analysis of topology-unaware TDMA MAC schemes for ad hoc networks with topology control 313
Distributed multichannel MAC protocol for IEEE 802.11 ad hoc wireless LANs 1000
Enhancing IEEE 802.11 MAC in congested environments 1605
MAC protocol design
Allowing bit errors in speech over wireless LANs 1643
Map
Internet core topology mapping and analysis 494
Markov chain analysis
Markov chain analysis of collaborative codes in random multi access communication systems 441
Markov chains
Enhancing IEEE 802.11 MAC in congested environments 1605
Markovian models
Markov models of internet traffic and a new hierarchical MMPP model 1835
Maximal matching
Packet scheduling in input-queued switches with a speedup of less than two and scheduling algorithms for switches with a configuration overhead 1721
Maximum throughput analysis
Performance of wireless networks with hidden nodes: a queuing-theoretic analysis 1179
Max–min
Toward end-to-end fairness: a framework for the allocation of multiple prioritized resources in switches and routers 2105
Max–min fairness
An evaluation of fair packet schedulers using a novel measure of instantaneous fairness 1925
MBmegabyte
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
MC-CDMA
An adaptive handoff priority scheme for wireless MC-CDMA cellular networks supporting realtime multimedia applications 1240
Measurement Based Networking
Towards a Measurement Based Networking approach for Internet QoS improvement 259
Medical applications
Performance analysis of low rate wireless technologies for medical applications 1266
Medium access control
Performance analysis of low rate wireless technologies for medical applications 1266
Performance evaluation of a generalized hybrid TDMA/CDMA protocol for wireless multimedia with QoS adaptations 1468
Medium access control protocols
Access delay for nodes with finite buffers in IEEE 802.15.4 beacon enabled PAN with uplink transmissions 1152
Miniaturisation
Development of field programmable modular wireless sensor network nodes for ambient systems 1531
(m,k)-Firm
Graceful degradation of loss-tolerant QoS using (m,k)-firm constraints in guaranteed rate networks 1393
MMPP
Markov models of internet traffic and a new hierarchical MMPP model 1835
Mobile ad hoc network (MANET)
Receiver-initiated multiple access protocols for spread spectrum mobile ad hoc networks 1251
Mobile Ad hoc networks
An efficient secure distributed anonymous routing protocol for mobile and wireless ad hoc networks 1193
Improving delivery ratios for application layer multicast in mobile ad hoc networks 1669
End-to-end support for statistical quality of service in heterogeneous mobile ad hoc networks 2119
Mobile code
Java active extensions: Scalable middleware for performance-isolated remote execution 1680
Mobile communication system
A fair scheduling algorithm with traffic classification for wireless networks 1225
Mobile IP
Movement detection delay analysis in mobile IP 550
Mobile network
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Mobile networks
A simple and scalable handoff prioritization scheme 773
Mobile object
JOR: a content-based object router 654
Mobility
Performance analysis of topology-unaware TDMA MAC schemes for ad hoc networks with topology control 313
The 'pure-IP' Moby Dick 4G architecture 1014
Mobility management
An approach for managing global mobility and roaming in the next-generation wireless systems 571

Model checking
Model checking active networks with SPIN 609
Monitoring
A real-time loss performance monitoring scheme 150
A measurement-based approach for dynamic QoS adaptation in DiffServ networks 2020
Motes
Development of field programmable modular wireless sensor network nodes for ambient systems 1531
Movement detection delay
Movement detection delay analysis in mobile IP 550
MPEG
Enhancing aggregate QoS for video streaming 2133
MPLS
Integrating connectionless and connection-oriented traffic using quantum packets 898
MSCmobile switching center
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
MSUmobile subscriber unit
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
MTSOmobile telephone switching office
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Multicast
Adaptive coding schemes for support of multicast audio to wireless devices 125
Performance analysis of large multicast switches with multicast virtual output queues 189
Improving delivery ratios for application layer multicast in mobile ad hoc networks 1669
An hybrid explicit multicast/recursive unicast approach for multicast routing 1814
Multicast routing
Distributed multicast routing for delay and delay variation-bounded Steiner tree using simulated annealing 1356
Multicast streaming
RLH: receiver driven layered hash-chaining for multicast data origin authentication 726
Multi-hop network
A new scalable optimal topology for multi-hop optical networks 557
Multimedia
High-speed networks: definition and fundamental attributes 956
An adaptive handoff priority scheme for wireless MC-CDMA cellular networks supporting realtime multimedia applications 1240
Multimedia communication
Adjustable broadcast protocol for large-scale near-video-on-demand systems 1303
Multimedia data
Multimedia data transmission and control using active networks 623
Multimedia networking
Capacity requirements of traffic handling schemes in multi-service networks 2070
Multimedia networks
Adaptive online bandwidth allocation and reservation for QoS sensitive multimedia networks 1959
Multimedia systems
Adjustable broadcast protocol for large-scale near-video-on-demand systems 1303
Multiple access
Markov chain analysis of collaborative codes in random multi access communication systems 441
Multiservice context
Class-based downlink capacity estimation of a WCDMA network in a multiservice context 1443
Multiservice networks
Quality of service and performance issues in multiservice networks subject to voice and video traffics 393
Multi-threshold guard channels
A general call admission policy for next generation wireless networks 1798

Network
Availability of end-to-end ideal QoS in IP packet networks 2047
Network caching
Design and performance analysis of multimedia document retrieval strategies for networked Video-on-Reservation systems 1910
Network calculus
Traffic shaping in aggregate-based networks: implementation and analysis 274
Delay bounds for FIFO aggregates: a case study 287
Graceful degradation of loss-tolerant QoS using (m,k)-firm constraints in guaranteed rate networks 1393
Network capacity planning
Capacity requirements of traffic handling schemes in multi-service networks 2070
Network engineering
Capacity requirements of traffic handling schemes in multi-service networks 2070
Network fairness
Efficient techniques for improved QoS performance in WDM optical burst switched networks 754
Network management
A graph-based proactive fault identification approach in computer networks 366
Time-aware admission control on top of time-unaware network infrastructures 405
Network measurements
Performance analysis under finite load and improvements for multirate 802.11 1095
Network planning
Near-optimal tree-based access network design 236
Network processor
Performance analysis of multi-dimensional packet classification on programmable network processors 1752
Network protocols modelling
A new methodology for TCP evaluation in a multiuser web environment 449

Network routing
Multiple path routing algorithm for IP networks 829
Network state
Multi-class QoS routing strategies based on the network state 1348
Network tomography
A bottom-up inference of loss rate 351
Networking
High-speed networks: definition and fundamental attributes 956
Least cost heuristic for the delay-constrained capacitated minimum spanning tree problem 1371
Next generation cellular networks
A general call admission policy for next generation wireless networks 1798
Next-generation wireless systems
An approach for managing global mobility and roaming in the next-generation wireless systems 571
Non-repudiation
RLH: receiver driven layered hash-chaining for multicast data origin authentication 726
ns-2
Asons: an automatically switched optical networks simulator 224

On-line decisions
Adaptive online bandwidth allocation and reservation for QoS sensitive multimedia networks 1959
Optical burst switching (OBS)
Efficient techniques for improved QoS performance in WDM optical burst switched networks 754
Optical networks
Restoration mechanisms for handling channel and link failures in optical WDM networks: tunable laser-based switch architectures and performance analysis 987
Optical packet switching
Providing absolute QoS in asynchronous bufferless optical packet/burst switched networks with the adaptive preemptive drop policy 1038
Scheduling algorithms in optical packet switches with input wavelength conversion 1456
Optimal
A new scalable optimal topology for multi-hop optical networks 557
Optimization
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Near-optimal tree-based access network design 236
Modeling and optimization of wireless local area network 1204
Optimum transmission schedule
A heuristic algorithm for optimum transmission schedule in broadcast packet radio networks 74
Orientation tracking
Orientation sensing for gesture-based interaction with smart artifacts 1552
OSPF
Inverse shortest path algorithms in protected UMTS access networks 765

Packet classification
Performance analysis of multi-dimensional packet classification on programmable network processors 1752
Packet classification and marking
Assured end-to-end QoS through adaptive marking in multi-domain differentiated services networks 2009
Packet concealment
Assessment of objective voice quality over best-effort networks 582
Packet error rate
Modeling and optimization of wireless local area network 1204
Packet losses
Marking algorithms for service differentiation of TCP traffic 2058
Packet marking
Short-circuiting the congestion signaling path for AQM algorithms using reverse flow matching 2082
Packet radio network
A heuristic algorithm for optimum transmission schedule in broadcast packet radio networks 74
Packet scheduling
Scalable quality of service across multiple domains 1997
Packet switch
Performance analysis of large multicast switches with multicast virtual output queues 189
Packet switching
Performance evaluation of new scheduling methods for the RR/RR CICQ switch 417
Packet-mode
SPF: to improve the performance of packet-mode scheduling 1380
PANA
Shepherd: A lightweight statistical authentication protocol for access control in wireless LANs 1618
Parameterization
Building programmable routing service for sensor networks 664
PDP context
An intelligent GGSN dispatching mechanism for UMTS 947
Peer-to-peer
Enabling ubiquitous sensor networking over mobile networks through peer-to-peer overlay networking 1586
Content-access QoS in peer-to-peer networks using a fast MDS erasure code 1778
Performance
On making TCP robust against spurious retransmissions 25
Design, implementation, and evaluation of the audio/video distribution transport protocol (AVDTP) for high quality audio support over Bluetooth 215
Performance analysis
Performance analysis of large multicast switches with multicast virtual output queues 189
TCP bulk repeat 507
Performance evaluation of a multilevel hierarchical location management protocol for ad hoc networks 1110
Performance analysis of low rate wireless technologies for medical applications 1266

Performance analysis of multi-dimensional packet classification on programmable network processors 1752
Performance evaluation
Content-access QoS in peer-to-peer networks using a fast MDS erasure code 1778
Modeling and optimization of wireless local area network 1204
Pervasive computing
Enabling ubiquitous sensor networking over mobile networks through peer-to-peer overlay networking 1586
Petri net
A proactive approach towards always-on availability in broadband cable networks 51
Physical layer
Physical layer impact on the design and performance of routing and broadcasting protocols in ad hoc and sensor networks 1138
Plane separation
Configurable software-based edge router architecture 1692
Playout buffering
Robust delay estimator for playout buffering in Internet audio applications 1938
Policing
Effective bandwidth shaping: a framework for resource dimensioning—extended version 1703
Policy
A measurement-based approach for dynamic QoS adaptation in DiffServ networks 2020
Positioning
Redundant positioning architecture 1575
Power-efficient
A modified power saving mode in IEEE 802.11 distributed coordinator function 1214
Prediction based fair queueing
Processing resource scheduling in programmable networks 676
Predictive mechanism
Optimization of radio resource management schemes in UMTS using pricing 1761
Predictors
A study of robust active queue management schemes for correlated traffic 1
Preemption
Adaptive online bandwidth allocation and reservation for QoS sensitive multimedia networks 1959
Prefetch
Cache-miss-initiated prefetch in mobile environments 741
Pretetching thresholds
Coordinated data prefetching for web contents 1947
Preventive maintenance
A proactive approach towards always-on availability in broadband cable networks 51
Priority
Providing absolute QoS through virtual channel reservation in optical burst switching networks 967
Privacy
Privacy-enhancing technologies for the world wide web 1791
Privacy-enhancing technology
Privacy-enhancing technologies for the world wide web 1791
Proactive routing
A self-adaptive zone routing protocol for Bluetooth scatternets 37
Probabilistic analysis
Performance evaluation of a multilevel hierarchical location management protocol for ad hoc networks 1110
Programmable
Building programmable routing service for sensor networks 664
Programmable networks
Future active Ip networks security architecture 688
Protection
Protocols for rapid restoration in WDM optical networks 86
Protocol
Design, implementation, and evaluation of the audio/video distribution transport protocol (AVDTP) for high quality audio support over Bluetooth 215
Distributed multichannel MAC protocol for IEEE 802.11 ad hoc wireless LANs 1000
Protocol design
TCP Vegas-A: Improving the Performance of TCP Vegas 429
Proxy caching
Coordinated data prefetching for web contents 1947
PSTNpublic switched telephone network
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Pure ALOHA
Markov chain analysis of collaborative codes in random multi access communication systems 441

QoS
IP versus AAL2 for transport in the UMTS radio access network 477
The 'pure-IP' Moby Dick 4G architecture 1014
Multi-class QoS routing strategies based on the network state 1348
Graceful degradation of loss-tolerant QoS using (m,k)-firm constraints in guaranteed rate networks 1393
Effective bandwidth shaping: a framework for resource dimensioning—extended version 1703
Fair intelligent admission control over resource-feedback DiffServ network 1770
Availability of end-to-end ideal QoS in IP packet networks 2047
Marking algorithms for service differentiation of TCP traffic 2058
FIAC: a resource discovery-based two-level admission control for differentiated service networks 2094
Toward end-to-end fairness: a framework for the allocation of multiple prioritized resources in switches and routers 2105
Enhancing aggregate QoS for video streaming 2133
QoS adaptation
A measurement-based approach for dynamic QoS adaptation in DiffServ networks 2020

QoS mapping
Framework for parameter mapping to provide end-to-end QoS guarantees in IntServ/DiffServ architectures 1074
QoS routing
Inter-domain QoS routing on Diffserv networks: a region-based approach 174
Qualities of service
Performance evaluation of a generalized hybrid TDMA/CDMA protocol for wireless multimedia with QoS adaptations 1468
Quality
Design and implementation of a network domain agency for scaleable QoS in the Internet 12
Quality of service
A real-time loss performance monitoring scheme 150
Design and analysis of multi-level active queue management mechanisms for emergency traffic 162
Towards a Measurement Based Networking approach for Internet QoS improvement 259
Delay bounds for FIFO aggregates: a case study 287
A simulation study of the adaptive RIO (A-RIO) queue management algorithm 300
Feedback-based bandwidth allocation with call admission control for providing delay guarantees in IEEE 802.11e networks 325
Quality of service and performance issues in multiservice networks subject to voice and video traffics 393
Multimedia data transmission and control using active networks 623
Processing resource scheduling in programmable networks 676
A simple and scalable handoff prioritization scheme 773
Providing absolute QoS through virtual channel reservation in optical burst switching networks 967
Framework for parameter mapping to provide end-to-end QoS guarantees in IntServ/DiffServ architectures 1074
An adaptive handoff priority scheme for wireless MC-CDMA cellular networks supporting realtime multimedia applications 1240
Distributed multicast routing for delay and delay variation-bounded Steiner tree using simulated annealing 1356
Java active extensions: Scalable middleware for performance-isolated remote execution 1680
Weighted deficit earliest departure first scheduling 1711
Reinforcement learning-based dynamic bandwidth provisioning for quality of service in differentiated services networks 1741
Content-access QoS in peer-to-peer networks using a fast MDS erasure code 1778
Adaptive online bandwidth allocation and reservation for QoS sensitive multimedia networks 1959
Scalable quality of service across multiple domains 1997
End-to-end support for statistical quality of service in heterogeneous mobile ad hoc networks 2119
Quality of service (QoS)
Automatic creation and reconfiguration of network-aware service access paths 591
Quality of Service (QoS), Routing optimisation, integer programming
OPQR-G: algorithm for efficient QoS partition and routing in multiservice IP networks 1987
Quality-of-service guarantee
Fair and efficient packet scheduling algorithms for multiple classes of service under QoS guarantee in UMTS 379
Quantum packets
Integrating connectionless and connection-oriented traffic using quantum packets 898
Queueing analysis
Access delay for nodes with finite buffers in IEEE 802.15.4 beacon enabled PAN with uplink transmissions 1152
Queueing theory
Performance analysis under finite load and improvements for multirate 802.11 1095
Performance analysis of large multicast switches with multicast virtual output queues 189

Radio link control acknowledged mode
Performance analysis of session initiation protocol based call set-up over satellite-UMTS network 1416
RAMrandom access memory
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65
Reactive routing
A self-adaptive zone routing protocol for Bluetooth scatternets 37
Real time control protocol (RTCP)
Scalability improvement of the real time control protocol 136
Real-time transport protocol (RTP)
Scalability improvement of the real time control protocol 136
Receiver-initiated multiple access
Receiver-initiated multiple access protocols for spread spectrum mobile ad hoc networks 1251
Redundancy scheme
Fault recovery mechanism in single-hop sensor networks 1877
Region adjustment
Movement detection delay analysis in mobile IP 550
Reinforcement learning/neuro-dynamic programming
Assured end-to-end QoS through adaptive marking in multi-domain differentiated services networks 2009
Reliability
Improving delivery ratios for application layer multicast in mobile ad hoc networks 1669
Remote execution
Java active extensions: Scalable middleware for performance-isolated remote execution 1680
Renewal process
Movement detection delay analysis in mobile IP 550
Reordering
Corruption and reordering robust tcp-friendly rate control 97
Replica placement
Combining replica placement and caching techniques in content distribution networks 1062
Resilience
Asons: an automatically switched optical networks simulator 224
Resource allocation
An adaptive framework for addressing fairness issues in wireless networks 1167

An evaluation of fair packet schedulers using a novel measure of instantaneous fairness 1925
Toward end-to-end fairness: a framework for the allocation of multiple prioritized resources in switches and routers 2105

Resource control
Java active extensions: Scalable middleware for performance-isolated remote execution 1680

Resource dimensioning
Effective bandwidth shaping: a framework for resource dimensioning—extended version 1703

Resource discovery
Fair intelligent admission control over resource-feedback DiffServ network 1770
FIAC: a resource discovery-based two-level admission control for differentiated service networks 2094

Resource management
On overlapping resource management and call setup signaling: a new signaling approach for internet multimedia applications 851

Restoration
Protocols for rapid restoration in WDM optical networks 86
Restoration mechanisms for handling channel and link failures in optical WDM networks: tunable laser-based switch architectures and performance analysis 987

Robust control
Robust delay estimator for playout buffering in Internet audio applications 1938

Robustness
A study of robust active queue management schemes for correlated traffic 1
Robust topology formation using BTnodes 1523

Round trip time
One-way delay estimation and its application 819

Route caching
Short-circuiting the congestion signaling path for AQM algorithms using reverse flow matching 2082

Routing
Design and implementation of a network domain agency for scaleable QoS in the Internet 12
A new scalable optimal topology for multi-hop optical networks 557
Building programmable routing service for sensor networks 664
Physical layer impact on the design and performance of routing and broadcasting protocols in ad hoc and sensor networks 1138
Multi-class QoS routing strategies based on the network state 1348
Least cost heuristic for the delay-constrained capacitated minimum spanning tree problem 1371

Routing algorithms
An efficient secure distributed anonymous routing protocol for mobile and wireless ad hoc networks 1193

Routing protocol
Cell based energy density aware routing: a new protocol for improving the lifetime of wireless sensor networks 1293
An hybrid explicit multicast/recursive unicast approach for multicast routing 1814

RSVP-TE
Asons: an automatically switched optical networks simulator 224

Satellite links
TCP Vegas-A: Improving the Performance of TCP Vegas 429

Satellite networks
TCP bulk repeat 507

Satellite UMTS
Performance analysis of session initiation protocol based call set-up over satellite-UMTS network 1416

Scalability
Scalability improvement of the real time control protocol 136

Scalable
A new scalable optimal topology for multi-hop optical networks 557

Scatternet formation and maintenance
SF-DeviL: an algorithm for energy-efficient Bluetooth scatternet formation and maintenance 1276

Scheduling
Fair and efficient packet scheduling algorithms for multiple classes of service under QoS guarantee in UMTS 379
Three new approaches for adjustment and improvement of the RR scheduler in a dynamic resource environment 929
Distributed multichannel MAC protocol for IEEE 802.11 ad hoc wireless LANs 1000
A modified power saving mode in IEEE 802.11 distributed coordinator function 1214
A fair scheduling algorithm with traffic classification for wireless networks 1225
Adjustable broadcast protocol for large-scale near-video-on-demand systems 1303
Weighted deficit earliest departure first scheduling 1711

Scheduling algorithm
SPF: to improve the performance of packet-mode scheduling 1380
Packet scheduling in input-queued switches with a speedup of less than two and scheduling algorithms for switches with a configuration overhead 1721

Secure service directory
SCAN: A secure service directory for service-centric wireless sensor networks 1517

Security architecture
Future active Ip networks security architecture 688

Security breaches
A modeling and simulation methodology for analyzing ATM network vulnerabilities 1317

Security in sensor networks
SCAN: A secure service directory for service-centric wireless sensor networks 1517

Self-organising networks
ScatterWeb: A wireless sensornet platform for research and teaching 1545

Self-organization
A simple and robust virtual infrastructure for massively deployed wireless sensor networks 1505

Self-similarity
Lognormal and Pareto distributions in the Internet 790
Sender-based TCP modification
TCP Prairie: a sender-only TCP modification based on adaptive bandwidth estimation in wired-wireless networks 246
Sensor networks
Building programmable routing service for sensor networks 664
Physical layer impact on the design and performance of routing and broadcasting protocols in ad hoc and sensor networks 1138
A semantic solution for data integration in mixed sensor networks 1564
Enabling ubiquitous sensor networking over mobile networks through peer-to-peer overlay networking 1586
Balanced-energy sleep scheduling scheme for high-density cluster-based sensor networks 1631
Energy efficient distributed image compression in resource-constrained multihop wireless networks 1658
Fault recovery mechanism in single-hop sensor networks 1877
Sensor nodes
Development of field programmable modular wireless sensor network nodes for ambient systems 1531
Service
Design and implementation of a network domain agency for scaleable QoS in the Internet 12
Service differentiation
Efficient techniques for improved QoS performance in WDM optical burst switched networks 754
Usage based service differentiation for end-to-end quality of service management 2146
Service level specification
Time-aware admission control on top of time-unaware network infrastructures 405
Service-based pricing
Optimization of radio resource management schemes in UMTS using pricing 1761
Service-centric sensor networks
SCAN: A secure service directory for service-centric wireless sensor networks 1517
Session initiation protocol
Performance analysis of session initiation protocol based call set-up over satellite-UMTS network 1416
Session set-up
Performance analysis of session initiation protocol based call set-up over satellite-UMTS network 1416
Shaping
Effective bandwidth shaping: a framework for resource dimensioning—extended version 1703
Share-per-input-link architecture
Scheduling algorithms in optical packet switches with input wavelength conversion 1456
Share-per-output-link architecture
Scheduling algorithms in optical packet switches with input wavelength conversion 1456
Short packets first
SPF: to improve the performance of packet-mode scheduling 1380
Short-lived flows
Subsidized RED: an active queue management mechanism for short-lived flows 540
Signaling
Short-circuiting the congestion signaling path for AQM algorithms using reverse flow matching 2082
Simple network management protocol
A graph-based proactive fault identification approach in computer networks 366
Simulated annealing
Distributed multicast routing for delay and delay variation-bounded Steiner tree using simulated annealing 1356
Simulation
Asons: an automatically switched optical networks simulator 224
An address autoconfiguration protocol for IPv6 hosts in a mobile ad hoc network 339
Model checking active networks with SPIN 609
Simulation and analysis
A new methodology for TCP evaluation in a multiuser web environment 449
Simulations
Delay-based early congestion detection and adaptation in TCP: impact on web performance 837
Providing absolute QoS in asynchronous bufferless optical packet/burst switched networks with the adaptive preemptive drop policy 1038
Enhancing IEEE 802.11 MAC in congested environments 1605
SIP
On overlapping resource management and call setup signaling: a new signaling approach for internet multimedia applications 851
Slotted ALOHA
Markov chain analysis of collaborative codes in random multi access communication systems 441
Soft handoff
Analysis of multiservice cellular networks with asymmetrical traffic and handoff queue 864
Software rejuvenation
A proactive approach towards always-on availability in broadband cable networks 51
Software-based router
Configurable software-based edge router architecture 1692
Speedup
Packet-based scheduling algorithm for CIOQ switches with multiple traffic classes 1410
SPIN
Model checking active networks with SPIN 609
Spreading code assignment
Receiver-initiated multiple access protocols for spread spectrum mobile ad hoc networks 1251
Spurious fast retransmit
On making TCP robust against spurious retransmissions 25
Spurious RTO
On making TCP robust against spurious retransmissions 25

SRR
Three new approaches for adjustment and improvement of the RR scheduler in a dynamic resource environment 929
Stability
A robust active queue management algorithm in large delay networks 485
Stable storage
Fault recovery mechanism in single-hop sensor networks 1877
Start time weighted fair queueing
Processing resource scheduling in programmable networks 676
Statistical QoS
Adaptive bandwidth provisioning with explicit respect to QoS requirements 1862
Steiner tree problem
Near-optimal tree-based access network design 236
Stochastic approximation
An adaptive framework for addressing fairness issues in wireless networks 1167
Stochastic processes
Performance analysis under finite load and improvements for multirate 802.11 1095
Stochastic reward net
A proactive approach towards always-on availability in broadband cable networks 51
Streaming
Enhancing aggregate QoS for video streaming 2133
Support vector machines
Application of online-training SVMs for real-time intrusion detection with different considerations 1428
Survivability
Protocols for rapid restoration in WDM optical networks 86
Restoration mechanisms for handling channel and link failures in optical WDM networks: tunable laser-based switch architectures and performance analysis 987
Switch architecture
Packet scheduling in input-queued switches with a speedup of less than two and scheduling algorithms for switches with a configuration overhead 1721
Synchronous MA
Markov chain analysis of collaborative codes in random multi access communication systems 441
Synchronous switching
Scheduling algorithms in optical packet switches with input wavelength conversion 1456
System level performance
The study of performance enhancement for integrated voice/data wireless networks by link adaptation 519
System longevity
A simple and robust virtual infrastructure for massively deployed wireless sensor networks 1505

Tangible user interface
Orientation sensing for gesture-based interaction with smart artifacts 1552
TCP
On making TCP robust against spurious retransmissions 25
Lifetime-based TCP service differentiation 108
A new methodology for TCP evaluation in a multiuser web environment 449
TCP bulk repeat 507
Marking algorithms for service differentiation of TCP traffic 2058
TCP congestion control
Short-circuiting the congestion signaling path for AQM algorithms using reverse flow matching 2082
TCP interactive
Interactive transparent networking–modeling examples of snoop and WTCP protocols 702
TCP vegas
TCP Vegas-A: Improving the Performance of TCP Vegas 429
TCP westwood
TCP Prairie: a sender-only TCP modification based on adaptive bandwidth estimation in wired-wireless networks 246
TDD
Analysis of multiservice cellular networks with asymmetrical traffic and handoff queue 864
TDMA
Performance analysis of topology-unaware TDMA MAC schemes for ad hoc networks with topology control 313
TDMA/CDMA
Performance evaluation of a generalized hybrid TDMA/CDMA protocol for wireless multimedia with QoS adaptations 1468
Testing
Model checking active networks with SPIN 609
Text categorization
Application of online-training SVMs for real-time intrusion detection with different considerations 1428
TFRC
Corruption and reordering robust tcp-friendly rate control 97
Towards a Measurement Based Networking approach for Internet QoS improvement 259
Third-generation wireless networks
Quality of service and performance issues in multiservice networks subject to voice and video traffics 393
Threat scenarios
A modeling and simulation methodology for analyzing ATM network vulnerabilities 1317
Throughput
Modeling and optimization of wireless local area network 1204
Time constrained multicast routing
Design and performance analysis of multimedia document retrieval strategies for networked Video-on-Reservation systems 1910
Time dependency
Time-aware admission control on top of time-unaware network infrastructures 405

Time division multiple access
A heuristic algorithm for optimum transmission schedule in broadcast packet radio networks 74
Time synchronization
Towards a unified view on space and time in sensor networks 1484
Time-slotting
Efficient techniques for improved QoS performance in WDM optical burst switched networks 754
Time-varying channels
An adaptive framework for addressing fairness issues in wireless networks 1167
Topological Clustering
End-to-end support for statistical quality of service in heterogeneous mobile ad hoc networks 2119
Topology
Internet core topology mapping and analysis 494
Topology control
Performance analysis of topology-unaware TDMA MAC schemes for ad hoc networks with topology control 313
Algorithms for ad hoc and sensor networks 1498
Topology discovery
Least cost heuristic for the delay-constrained capacitated minimum spanning tree problem 1371
Topology formation and control
Robust topology formation using BTnodes 1523
Traffic characterization
Towards a Measurement Based Networking approach for Internet QoS improvement 259
Traffic classes
OPQR-G: algorithm for efficient QoS partition and routing in multiservice IP networks 1987
Traffic engineering
Inter-domain QoS routing on Diffserv networks: a region-based approach 174
Inverse shortest path algorithms in protected UMTS access networks 765
Traffic mix
Analysis of multiservice cellular networks with asymmetrical traffic and handoff queue 864
Traffic models
Quality of service and performance issues in multiservice networks subject to voice and video traffics 393
Traffic shaping
Traffic shaping in aggregate-based networks: implementation and analysis 274
Transfer bursts
Lognormal and Pareto distributions in the Internet 790
Transfer times
Lognormal and Pareto distributions in the Internet 790
Transparency service model
Interactive transparent networking–modeling examples of snoop and WTCP protocols 702
Transparent networking
Interactive transparent networking–modeling examples of snoop and WTCP protocols 702
Transport
IP versus AAL2 for transport in the UMTS radio access network 477
Tree-based networks
Near-optimal tree-based access network design 236
TStabu search
Assigning cells to switches in mobile networks using an ant colony optimization heuristic 65

UDP-lite
Corruption and reordering robust tcp-friendly rate control 97
UMTS
Quality of service and performance issues in multiservice networks subject to voice and video traffics 393
Inverse shortest path algorithms in protected UMTS access networks 765
An intelligent GGSN dispatching mechanism for UMTS 947
Uplink
Cache-miss-initiated prefetch in mobile environments 741
UTRAN
IP versus AAL2 for transport in the UMTS radio access network 477

Variable-bit-rate (VBR)
The enhanced staircase broadcasting for VBR videos 1903
Variable-length packet
Performance evaluation of new scheduling methods for the RR/RR CICQ switch 417
Packet-based scheduling algorithm for CIOQ switches with multiple traffic classes 1410
VBR video
An optimal cache algorithm for streaming VBR video over a heterogeneous network 1852
Video
Enhancing aggregate QoS for video streaming 2133
Video broadcast
Adjustable broadcast protocol for large-scale near-video-on-demand systems 1303
Video cache
An optimal cache algorithm for streaming VBR video over a heterogeneous network 1852
Video staging
An optimal cache algorithm for streaming VBR video over a heterogeneous network 1852
Video streaming
An optimal cache algorithm for streaming VBR video over a heterogeneous network 1852
Video-on-demand (VOD)
The enhanced staircase broadcasting for VBR videos 1903
Video-on-Reservation
Design and performance analysis of multimedia document retrieval strategies for networked Video-on-Reservation systems 1910
Virtual-time
Analysis of virtual-time complexity in weighted fair queuing 802
Voice
IP versus AAL2 for transport in the UMTS radio access network 477

Voice and video traffics
Quality of service and performance issues in multiservice networks subject to voice and video traffics 393
VoIP
Assessment of objective voice quality over best-effort networks 582
Allowing bit errors in speech over wireless LANs 1643
Vulnerabilities
A modeling and simulation methodology for analyzing ATM network vulnerabilities 1317

WAP gateway
An efficient load balancing strategy for scalable WAP gateways 1028
Wavelength converter
Scheduling algorithms in optical packet switches with input wavelength conversion 1456
Wavelength division multiplexed (WDM) networks
Restoration mechanisms for handling channel and link failures in optical WDM networks: tunable laser-based switch architectures and performance analysis 987
Wavelength division multiplexing (WDM)
Efficient techniques for improved QoS performance in WDM optical burst switched networks 754
WCDMA
Class-based downlink capacity estimation of a WCDMA network in a multiservice context 1443
WDM optical networks
Protocols for rapid restoration in WDM optical networks 86
WDM opticla networks robust routing
Finding multiple routing paths in wide-area WDM networks 811
Web caching
Optimizing content distribution through adaptive distributed caching 640
Web characterization
An investigation of web crawler behavior: characterization and metrics 880
Web prefetching
Coordinated data prefetching for web contents 1947
Web traffic
A new methodology for TCP evaluation in a multiuser web environment 449
Weight allocation
Weight allocation in distributed admission control for wireless networks 199
Weighted fair queuing
Analysis of virtual-time complexity in weighted fair queuing 802
WFQ
An evaluation of fair packet schedulers using a novel measure of instantaneous fairness 1925
Wired-cum-wireless networks
TCP Prairie: a sender-only TCP modification based on adaptive bandwidth estimation in wired-wireless networks 246
Wireless
Corruption and reordering robust tcp-friendly rate control 97
Adaptive coding schemes for support of multicast audio to wireless devices 125
Distributed multichannel MAC protocol for IEEE 802.11 ad hoc wireless LANs 1000
Wireless ad hoc networks
Fault recovery mechanism in single-hop sensor networks 1877
Wireless communications
Enhancing IEEE 802.11 MAC in congested environments 1605
Wireless fair queueing
Wireless packet fair queueing algorithms with link level retransmission 713
Wireless LAN
Feedback-based bandwidth allocation with call admission control for providing delay guarantees in IEEE 802.11e networks 325
Performance analysis under finite load and improvements for multirate 802.11 1095
Allowing bit errors in speech over wireless LANs 1643
Wireless network
A fair scheduling algorithm with traffic classification for wireless networks 1225
Wireless networks
Weight allocation in distributed admission control for wireless networks 199
TCP bulk repeat 507
Wireless packet fair queueing algorithms with link level retransmission 713
An adaptive framework for addressing fairness issues in wireless networks 1167
An efficient secure distributed anonymous routing protocol for mobile and wireless ad hoc networks 1193
Wireless packet scheduling
Wireless packet fair queueing algorithms with link level retransmission 713
Wireless QoS
Wireless packet fair queueing algorithms with link level retransmission 713
Wireless security
An efficient secure distributed anonymous routing protocol for mobile and wireless ad hoc networks 1193
Shepherd: A lightweight statistical authentication protocol for access control in wireless LANs 1618
Wireless sensor network deployment
Robust topology formation using BTnodes 1523
Wireless sensor networks
Cell based energy density aware routing: a new protocol for improving the lifetime of wireless sensor networks 1293
A simple and robust virtual infrastructure for massively deployed wireless sensor networks 1505
Development of field programmable modular wireless sensor network nodes for ambient systems 1531
Towards a unified view on space and time in sensor networks 1484

ScatterWeb: A wireless sensornet platform for research and teaching 1545

WLAN
Performance improvements of integrating ad hoc operations into infrastructure IEEE 802.11 wireless local area networks 1123
Performance analysis of low rate wireless technologies for medical applications 1266

Performance analysis of low rate wireless technologies for medical applications 1266

ZigBee
Access delay for nodes with finite buffers in IEEE 802.15.4 beacon enabled PAN with uplink transmissions 1152

Zone routing protocol
A self-adaptive zone routing protocol for Bluetooth scatternets 37
